PRODUCT DEMONTRATION
PRESENTED BY HORIZON SOLUTIONS

LightFactory

You are invited

Horizon Solutions & Dream Solutions invite you to a product demonstration with Martin Searancke, lead developer of the professional lighting control sysetm, LightFactory. Focussing on LightFactory's extensive feature set and easy of use, this demonstration will help to show that PC based lighting control is no longer just for the club market or second tier rock and roll.

Not the Lighting Software you used in the 90's

Created by lighting designers, LightFactory offers a new standard in traditional dimmer control and adds exceptional, full-featured, intelligent-light support. Most software based control systems focus on moving light support but lack the many features that make traditional lighting desks standout. LightFactory closes that gap. LightFactory out performs all other PC based lighting packages when used in theatrical applications as it works and is layed out like a theatrical lighting console.

LightFactory can output up to 100 DMX universes (51,200 channels) on industry standard USB devices as well as Ethernet protocols including ARTNET, ACN, Pathport & ENTTEC's ESP. It utilizes new RDM standards for device control.

November 2nd 2011
7pm - 9pm

Montreal Room B
DoubleTree by Hilton
655 Dixon Rd. Toronto, ON
416-244-1711

**Everyone is welcome
No registration required
Space is limited**
